

# WHO'S GOT YOUR BACK?

The brothers who built the first airplane may never have left the ground at Kitty Hawk, N.C., back in 1903 without the engine built by Charles Edward Taylor. A largely unknown but pioneering innovator of his time, Taylor was the first to find the proper balance of power to weight in order to support liftoff. His aluminum, water-cooled engine propelled that historic flight—and the success of the pilots credited as the forefathers of modern aviation. Taylor went on to become a lead mechanic at the Wright Company, helping to ensure the safety and success of early aviators across the country.

## STRONGER TOGETHER

When you clear and custody with National Financial, we've got your back. We're committed to supporting your business with deep industry experience, personalized service, operational expertise, and innovative technology.

Tell us your story
