2012 INDUSTRY-WIDE BCP TEST

Hotspot Test Script

The Hotspot application will not be running to preclude the possibility of live trades occurring. Hotspot will, though, provide telnet/echo servers for connectivity testing.

In DR scenario all Hotspot applications will be available on the same IP:PORT where they are normally available. Customers should test from their DR sites to Hotspot DR and all IP:PORT combinations will be advertised from the Knight DR datacenter.

Contact Hotspot for complete details.
